

Dream reports of animal rights activists.
By Lewis, Jacquie E.

Dreaming. Vol 18(3), Sep 2008, 181-200.

Abstract

This study examined the nighttime dream experiences of animal rights activists. The sample consisted of 284 activists who attended the Animal Rights 2004 conference. Participants completed the C. S. Hall and R. Van de Castle (1966) Most Recent Dream Survey (as cited in Domhoff, 1996). The data on dreams were compared with statistical norms on dream content developed by C. S. Hall and R. Van de Castle (as cited in Domhoff, 1996). Results indicated that activists reported animal dream characters at a much higher rate than the general population. Activists also overwhelmingly had more friendly animal dreams than did the general public. Examples of dream reports, as well as the variety of animal species, are also discussed.
