About the numbers

The Food and Agriculture Organization of the United Nations (FAO, www.fao.org) collects extensive statistics about food production and trade around the world. One such statistic is the number of animals slaughtered, broken down by species, year, and country. These numbers are part of a larger database called GLiPHA (Global Livestock Production and Health Atlas). As of this writing, a web interface to GLiPHA can be found at this URL:

<http://www.fao.org/ag/aga/glipha/index.jsp>

The web interface is somewhat cumbersome to use, and it takes a while until one arrives at the actual numbers of slaughtered animals. In addition, it does not appear to be possible to view total slaughter numbers per country or worldwide. To make such numbers more easily accessible, we have created this document which contains all slaughter statistics, as well as some charts based on the numbers, for the most recent year for which complete slaughter statistics were available (2004).

This document -- in its entirety, or any part of it -- is free to use to anyone, though credits given to the author are appreciated.

Method

As a reference, and to facilitate reviews and verification of the data provided, the steps we used to to display and collect the numbers are described below:

1. Open the URL: <http://www.fao.org/ag/aga/glipha/index.jsp>
2. Click tab: "table"
3. Select Region: "World"
4. Select Theme: "Livestock Pop & Prod"
5. Select Sub Theme: "Livestock Production"
6. Select Row: "Area"
7. Select Column: "Time"

www.sfvegan.org

8. Select Product: "Meat"
9. Select Species: (the species whose slaughter statistics you want to view)
10. Select Topic: "No. animals slaughtered"
11. Uncheck "Display units"
12. Click link "Paging off" (the paging system appeared to be broken in Firefox 2.0.0.14).

Our table was compiled by selecting each of the 13 available species (Asses, Buffaloes, Camels, Cattle, Chickens, Ducks, Goats, Horses, Mules, Pigs, Poultry, Sheep, Turkeys), then copying the numbers of the latest available year (2004) to the clipboard, and finally saving to a text file. To shorten the process of combining the numbers into one single table and calculating the total aggregate numbers, we wrote several computer programs in the Perl programming language to read and process the 13 text files into a single tab separated text file. This text file was then imported into the Apple Pages word processor and converted into a table.

As a last step, the table has been spot checked for correctness, at approximately 50 data points.

Animal Slaughter Statistics for 2004, according to FAO:

Notes:

1. Numbers are slaughtered animals for meat in thousands, rounded to thousands.
2. Since the practice of slaughtering “spent” laying hens and dairy cows for meat is widespread, we assume that the numbers for chickens and cattle include these animals as well.
3. According to these statistics, in 2004 more than 52 billion animals were slaughtered worldwide.
